KlassikDrain K200

Sites with falls present a challenge to traditional pit and pipe drainage systems, often a grated channel is the best solution. The area leading to the new exhibition halls at the ASB showgrounds had just this problem.

Sloping down from a raised car park towards the main entry, but also needing to match the varying contours and curved building line, designers chose to use a grated channel drain for most efficient surface water capture.

ACO's KlassikDrain sloped K200 with Heelsafe® Anti-Slip grates were chosen, providing a pedestrian-friendly grating capable of taking heavy vehicle traffic when exhibitions are loaded in and out.
