

Bromley Park Hatchery

ACO Gully 157

When Bromley Park Group decided to invest in a new chicken hatchery, hygienic function and ease of maintenance was high on the priority list.

Designers sought to use a combination of linear and point drains to most effectively deal with wash down. ACO's Gully 157 with mesh grate, integrated foul air trap and removable strainers were chosen. The stainless steel body with rounded corners allowed for chemical resistance and easy cleaning. An integrated foul air trap is completely removable and removes the need for a P-trap to be included in the below slab pipe work.

Elsewhere in the project sloped KlassikDrain KS100 with a stainless slotted grate was used where linear drainage was required.
