

Metlifecare Tauranga

OnePour ThresholdDrain

Metlifecare in Tauranga is a new retirement village catering for the growing need for care facilities in the Bay of Plenty. A multi-unit facility with nearly every door requiring level threshold access, an E2 compliant drainage solution was required.

Architects chose to use the recently introduced ACO OnePour ThresholdDrain. Its unique design requires only one concrete pour and provides a fully E2 compliant level threshold drain.

Bolting to the exterior slab, the frame sits above a one pour cast in-situ channel so is easy to detail and install. The full range of KlassikDrain grates can be used to match other channel drains at other places across the project.
