

ACO ThresholdDrain

Mount Central

ACO Cantilever ThresholdDrain

Originally a variety store, the corner of two main streets in Mt Maunganui needed a makeover. A high-end multi-use development was planned, incorporating two buildings linked with a covered courtyard.

To maximise flow from the covered courtyard to the cafes and restaurants, architects chose to include level thresholds in their design. An E2 compliant solution was required, as well as needing to cope with being in a sea spray zone.

ACO's Cantilever ThresholdDrain with Stainless Steel 5 star Heelsafe® Anti-Slip grates were chosen for their code compliance, architectural appeal and corrosion resistance.
