

Nixon Road Driveway

KlassikDrain K200

As part of Auckland International Airport's major roading upgrade, Nixon Road has been resurfaced and resealed. To match the new levels, a modification to the driveway to Abbeville Estate was required.

Road drainage either side of the driveway was provided by swales, designers sought to continue the drainage across the driveway. A grated channel allows for easier maintenance access with completely removable grates, and is more easy to install than a cast in situ channel.

ACO's KlassikDrain sloped K200 with ductile iron slotted grates were chosen, matching the hydraulic capacity of the swale, and providing a proven Class D loading grate to match the NZTA load requirements.
