

Manukau Station

Type 66 Polycrete® Cable Pit

The Manukau Branch is the first new railway line in Auckland since 1930 and opened in 2012. The terminus integrates with the new Manukau Institute of Technology building and will connect with a bus interchange to provide a transport hub to a major retail and education centre.

Throughout the station and surrounding area ducts needed to be run to connect new to existing services. Contractors chose to use ACO's cablemate pits due to their excellent insulation properties and ease of installation.

The Polycrete® lid is lightweight and has an AS/NZS 4586 Slip Resistance Rating R10.
