

ACO Access

ACC Access Cover

PORTFOLIO

Invercargill City Centre Upgrade

In mid-2022 to early 2023, ACO ACC Access Covers were installed in the Street Upgrade project for Invercargill's city centre. These covers were customised for 80 mm pavers and were chosen for their discreet and unobtrusive design, providing swift access to underground utilities. ACO ACC Covers were selected due to their ability to seamlessly blend with the visual aesthetics, their compatibility with the paver depth for quick and easy installation, and ACO's established track record in numerous street upgrades.

Benefits

- The recessed ACC Access Cover offers the ability to fill the cover with pavers to match or complement the surrounding pavement, preserving visual continuity of the road.
- Available as single or multipart covers.
- Certified to AS 3996 Load Class D.
