

ACO Access

Rhinocast® Access Cover

PORTFOLIO

Christchurch Airport

As part of the expansion of Christchurch Airport's International Terminal, designers had multiple accesses that needed visually appealing covers. To provide data and power to the new check in kiosks and information screens, specifiers required a number of pits throughout the international check in area of the new terminal. These covers were required to provide a seamless floor finish and had to be capable of taking the 12mm floor tiles used in this area. This would require one of the many infill covers that ACO is able to offer.

Benefits

- The recessed **Rhinocast®** cover offers the ability to fill the cover with tiles to match or complement the surrounding pavement, providing a discreet cover for service pits.
- A strip of stainless steel, manufactured in a custom depth, is fixed to the edge of the cover and frame for a attractive finish suited for this application.
- Certified to AS 3996 Class B loading.
