

ACO Access

Rhinocast® Access Cover

PORTFOLIO

Elliott and Darby Street Upgrade

Auckland's streetscapes and parks have received much recognition for their shared spaces which have established more pedestrian-friendly areas for public activity and traffic calming. The Elliott and Darby streets were opened as a shared zone in 2012. The shared space solution required both the council and designers to integrate a narrow single direction road with wide pavements using 80mm Road Pavers. Secure access was required to services running below the street, and ACO's Rhinocast® covers were used to facilitate this without the need to alter the height of the pavers.

Benefits

- The recessed **Rhinocast®** cover offers the ability to fill the cover with 80 mm Road Pavers without the need to cut down the height.
- Also concrete or bitumen can be used to match and complement the surrounding pavement.
- The Cover is Telecom approved and certified to AS 3996 Class D loading.
