

ACO Access

Urbanfil® Access Cover

PORTFOLIO

Botany Garden Lane

The Garden Lane is part of Botany's Town Centre and was constructed in 2019. The collaborative project transformed the existing outside shopping precinct into an attractive light flooded indoor area and with the shops reopening after the second Covid 19 lockdown, people are floating around again. ACO contributed to the project, supplying discreet access covers for the underground services. Due to the ability to fill the cover with material matching the pavement, meeting the high design standards, ACO's **Urbanfil® Pavermate®** Access Covers were installed along the new Garden Lane, leaving an aesthetic and complementary finish worthy of the project.

Benefits

- The recessed **Urbanfil®** cover offers the ability to fill the cover with tiles to match or complement the surrounding pavement, preserving the continuity of the floor surface.
- Concrete ties on all frames ensuring good seating in the surrounding concrete.
- Certified to AS 3996 Class B loading.
