

ACO Access

Rhinocast® Access Cover

PORTFOLIO

New Plymouth Airport Redevelopment

The gold award winning redevelopment of New Plymouth's Airport Terminal, where the old building has been turned into an aesthetic modern building, was completed in March 2020. Including traditional features, the new terminal was designed to reflect the surrounding Taranaki region. ACO's products were installed across the site, matching the architectural story of the project. The **Rhinocast®** Access Covers with stainless steel decorative edges were chosen to provide discreet access to underground services, preserving the continuity of the floor surface.

Benefits

- The recessed **Rhinocast®** access cover offers the ability to fill the cover with tiles to match or complement the surrounding environment.
- Reinforcing ribs cast into the cover provide required strength
- Stainless steel decorative edge for an attractive finish.
- Certified to AS 3996 Class B loading.
