

ACO Cablemate

Type 66 Polycrete® Cable Pit

PORTFOLIO

Manukau Station

The Manukau Station, opened in 2012, is the first new railway line in Auckland since 1930. The terminus integrates with the new Manukau Institute of Technology building and will be connected with a bus interchange to provide a transport hub to a major retail and education centre. Throughout the station and surrounding area ducts needed to be run to connect new and existing services. Contractors chose to use ACO's cablemate pits due to their excellent insulation properties and ease of installation.

Benefits

- The lightweight ACO **Polycrete®** lid enables easy installation and maintenance.
- Providing robust cable ducting chambers, the pit is easy to handle and cut for cable entry penetration.
- Weather resistant Access Cover.
