

ACO Gully

ACO Gully 157 with mesh grate 316

PORTFOLIO

Bromley Park Hatchery

When Bromley Park Group decided to invest in a new chicken hatchery, hygienic function and ease of maintenance was high on the priority list. Designers sought to use a combination of linear and point drains to effectively deal with wash down. ACO's Gully 157 with mesh grate, integrated foul air trap and removable strainers were chosen. The stainless steel body with rounded corners allows for chemical resistance and easy cleaning. An integrated foul air trap is completely removable and no P-trap needed to be included in the below slab pipe work.

Benefits

- Integrated foul air trap and removable strainers.
- Ensuring chemical resistance and easy cleaning, the stainless steel 316 body and grate provide a highly hygienic solution.
- Slip resistant mesh grate ensuring safe passage.
