

ACO Infrastructure

KerbDrain HB200

PORTFOLIO

Ayr Street / Parnell Road Intersection

When a new raised table was elevated at the Ayr Street / Parnell Road intersection in May 2020, a drain with lateral inlets was required to collect the additional water running down the raised table to the sides of the road. Made from durable polymer concrete, ACO's KerbDrain KDHB200 was installed for its high capacity and hard-wearing characteristics. The lateral inlets of the KerbDrain ensure the channel does not get blocked by debris or foliage. This also simplifies the cleaning process. Using an acceptable angle between the product parts, a curve following the course of the street and footpath was created. Thus leaving an appealing and tidy finish.

Benefits

- The access unit with iron lid allows easy access for maintenance.
- One-piece unit design for lifetime integrity and security.
- Profiled side walls and strengthening ribs provide channel strength and anchorage to surrounding concrete.
- Certified to AS 3996 Class D loading.
