

ACO HygieneFirst

Hygienic Box Channel

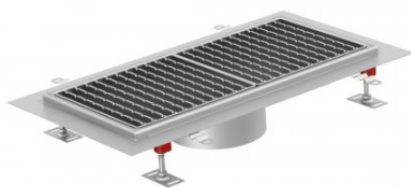

PORTFOLIO

New World Ravenswood Canterbury Region

Foodstuffs New World Ravenswood supermarket was built in 2021 for a growing residential area in the North Canterbury region. The ACO Building Drainage products inside have a hygienic design and are made from 316 grade stainless steel. Custom and fully sloped hygienic box channels were installed along with floor waste gullies in the kitchen, the butchery and chiller rooms. The hygienic design minimises the risk of bacterial growth and provides efficient surface water management. Furthermore, the products are fast and easy to clean due to CIP (Clean in Place) properties, which suits the fast-paced environment of a Foodstuffs supermarket.

Benefits

- Hygienic Box Channel made from 316 grade stainless steel.
- Capable of handling large volumes of fluid for optimal surface water management.
- Hygienic design minimises risk of bacterial growth.
- CIP (Clean in Place) properties allow for fast and easy cleaning.
