## KerbDrain QK200B with K200

PORTFOLIO

### Havelock Road Napier

The use of ACO KerbDrain QK200B in conjunction with ACO KlassikDrain K200 at Havelock Road in Napier allows for interruptions in the kerb, such as driveways, while still ensuring consistent capture of surface water. In this scenario, the water flows at an accelerated rate, especially given the steep road, emphasising the critical need for effective surface water management. The inclusion of KlassikDrain simplifies access for maintenance purposes. The system proved its efficiency after Cyclone Gabrielle, leaving the locals very happy with its performance

### Benefits

- One-piece unit design for lifetime integrity and security.
- Profiled side walls and strengthening ribs provide channel strength and anchorage to surrounding concrete.
- The access unit with aluminium lid allows easy access for maintenance.
- Certified to AS 3996 Class D loading.
