KerbDrain QK200B

PORTFOLIO

### ACO Products Transform Safety on Main Road Kumeu SH16

In 2023, Main Road Kumeu SH16 witnessed a transformation as part of the NZ Transport Roadworks Safety Improvements project. ACO products, including KerbDrain QK200B and SlabDrain H300SK were strategically installed to address the challenge of underground services in the area. The KerbDrain ensures continuous stormwater capture through the wide inlet slots, while the SlabDrain is able to manage potential overflow. ACO's continuous capture and the ability to deal with the depth restriction proved pivotal, sparing the need for disruptive excavation on this busy main road. The successful and timely installation underlines the efficiency ACO brings to projects, ensuring the highest standards of performance and reliability.

#### Benefits

- One-piece unit design for lifetime integrity and security.
- Profiled side walls and strengthening ribs provide channel strength and anchorage to surrounding concrete.
- The access unit with aluminium lid allows easy access for maintenance.
- Certified to AS 3996 Class D loading.
