

ACO Drain

KlassikDrain K100 with Brickslot

PORTFOLIO

Arvida Retirement Village Tasman

ACO Brickslot was re-designed into this project and used for cost-saving across the whole installation and to provide a seamless look. The system collects the runoff from the building, while being Heelsafe and wheel & walking cane safe – A safe solution for the building and its owners. The 10 mm slot cover on the KlassikDrain channel allows for a discreet looking drain along the building line, creating an aesthetic finish. The system is an E2 alternative solution, complying with E1 of the NZ Building Code with complete supporting calculations provided by the ACO Technical Team.

Benefits

- ACO'S KlassikDrain KS100 is a suitable alternative solution under E1 to the E2 NZ Building Code, providing level threshold drainage.
- The 10mm slot of the Stainless Steel Brickslot cover blends in with the paving creating a discreet and aesthetic architectural finish.
- An access unit provides discreet access to the channel or In-line pit for maintenance.
