

ACO Drain

KlassikDrain K200 with Double Brickslot

PORTFOLIO

Invercargill City Centre Upgrade

In mid-2022 to early 2023, ACO products were installed in a Street Upgrade project for Invercargill's city centre. The products included ACO K200 with Double Brickslot, customised for 80 mm pavers, and ACO ACC Covers. ACO Double Brickslot efficiently manages surface water while maintaining minimal aesthetic impact for visual continuity of the pavement. ACO was chosen for its excellent hydraulic performance, channel capacity, and compatibility with the paver depth. Notably, this project marked the first installation of ACO Double Brickslot and was completed within the specified timeframe.

Please note that this images shows Brickslot with a single slot.

Benefits

- ACO'S KlassikDrain K200 with Double Brickslot Cover customised for 80 mm pavers.
- The two 8 mm slots of the Stainless Steel Brickslot cover blend in with the paving creating a discreet and aesthetic architectural finish.
- An access unit provides discreet access to the channel or In-line pit for maintenance.
