

ACO Drain

KlassikDrain KS100 with Brickslot

PORTFOLIO

Christchurch Covention Centre

ACO KlassikDrain KS100 & KS200 along with stainless Brickslot covers have been successfully installed at Christchurch's Convention Centre. The system surrounds the whole building complex and involved both Architects and Landscape Architects as the product serves two purposes and on the one hand it was used as an E2 Alternative Solution to protect the building from any runoff of the cladding. On the other hand it was used as part of the overall landscape design capturing the surface water. The 10mm discreet slot blends in with the adjoining pavers for a clean optic. The ACO Brickslot grates are well tailored to this project with custom height and fully sloped units suiting the pavers and providing ideal hydraulic efficiency.

Benefits

- ACO's KlassikDrain with Brickslot cover is a suitable E2 alternative solution under E1 of the NZ Building Code, providing level threshold drainage.
- Wheelchair compliant to AS 1428.2 Clause 9(c).
- Access unit provides discreet access for easy cleaning and maintenance.
