PORTFOLIO

Britomart Temporary Station

Auckland's public train network is adding a \$3billion train line running from the current Britomart through the CBD up to Mt Eden. The first stage involves significant structural works to the heritage Britomart Station, therefore a temporary station was constructed to take its place.

The brick paved concourse, although under cover, featured many wide openings onto surrounding pavements. For pedestrian safety, any surface water needed to be managed to ensure slip-free conditions.

Benefits

- Plastic **Heelsafe**® Anti-Slip grates with its hard wearing nature, providing pedestrian friendly surface water management.
- Interconnection and profiles allow easy and effective joining of channels.
- Knock-outs included in every fifth channel unit allow vertical outlet connection to the pipework.
