

ACO Infrastructure

MonoDrain PD100

PORTFOLIO

### Evans Bay Cycleway

The cycleway has been updated with a two-way bike path and separate footpath. The new paths on the seaward form part of Tahitai and Te Aranui o Pōneke. ACO MonoDrain PD100 was used to keep the cycleway safe for the users. The monolithic polymer concrete construction ensured there were no corrosion-prone materials in the harsh sea spray environment.

### Benefits

- One-piece design for lifetime integrity and security.
- Integral **Heelsafe**® inlets designed to resist debris blockage.
- External faces anchor channel securely into concrete surround.
- Polymer concrete is durable, yet lightweight, material made from polyester resin binder reinforced by mineral aggregates and fillers.
