

ACO Drain

PowerDrain S100K

PORTFOLIO

Z Energy Petrol Station Andersons Bay Dunedin

As a standard specification endorsed by Z Energy, ACO's PowerDrain S100K was installed at the 'Andy Bay' petrol station in Dunedin in July 2020. After 20 years it was time to upgrade the already installed ACO KlassikDrain to a heavier duty product. Just as trucks become larger, to adapt to this new working environment so will the ACO drain. Therefore ACO's PowerDrain was the obvious choice including the unique built in fall.

Benefits

- ACO's PowerDrain S100K with Ductile Iron grates, providing heavy duty trafficable surface water management.
- Ductile Iron Edge Rail - integrally cast-in rail provides maximum strength and protection for the channel body.
- Recesses in the edge rail fit around 'anti-shunt' lugs on the grate to prevent longitudinal movement.
- Certified to AS 3996 Load Class G (900kN).
