

ACO Drain

PowerDrain S200K

PORTFOLIO

Bunnings Mt Wellington

Bunnings Mt Wellington opened its doors in 2011, featuring a large multi-purpose outdoor area for plants, paving and outdoor supplies.

With the area not covered, the drain would need to take stormwater and over spill from watering the plants. Because of the versatile nature of large-format stores, the drain would be required to regularly take fork lift loadings.

Benefits

- ACO's PowerDrain S200K with Ductile Iron Slotted grates provides high capacity and large inlet slots that ensure the grate does not get blocked with plant debris or other material during regular use.
- Ductile Iron Edge Rail - integrally cast-in rail provides maximum strength and protection for the channel body.
- Recesses in the edge rail fit around 'anti-shunt' lugs on the grate to prevent longitudinal movement.
