

ACO Drain

PowerDrain S200K

PORTFOLIO

Esmonde Road Takapuna

Esmonde Road in Takapuna has had a history of flooding in some sections. A high road crown and insufficient drainage along the gutters being the main reasons. In some cases, runoff would be spilling into nearby streets and threatening retail outlets. Designers engaged ACO for a solution. An important endorsement was the proven use of ACO products in similar applications. With the PowerDrain S200K, ACO was able to provide a heavy duty drainage solution, perfectly suited to the requirements of the site.

Benefits

- ACO's PowerDrain S200K with Ductile Iron Slotted grates provides high capacity and large inlet slots that ensure the grate does not get blocked during regular use.
- Ductile Iron Edge Rail - integrally cast-in rail provides maximum strength and protection for the channel body.
- Recesses in the edge rail fit around 'anti-shunt' lugs on the grate to prevent longitudinal movement.
