

ACO Drain

PowerDrain S200K

PORTFOLIO

Te Puia Rotorua

Te Puia spans 70 hectares within the Te Whakarewarewa Geothermal Valley on the edge of Rotorua. The site has achieved Qualmark Gold status, which shows Te Puia has been independently validated as a tourism business of the very highest quality. The ACO PowerDrain S200K with Iron Intercept **Heelsafe**® Anti-Slip grate was chosen to provide both high load class when necessary and safety to all visitors and staff.

Benefits

- ACO's PowerDrain S200K with Ductile Iron Slotted grates provides high capacity and large inlet slots that ensure the grate does not get blocked during regular use.
- Ductile Iron Edge Rail - integrally cast-in rail provides maximum strength and protection for the channel body.
- Recesses in the edge rail fit around 'anti-shunt' lugs on the grate to prevent longitudinal movement.
