

ACO Environment

STORMBRIXX® SD

PORTFOLIO

Wilkinson Road Auckland

Bringing a new multi-storey commercial building to Ellerslie, Auckland, ACO supplied 40 pallets of ACO StormBrixx for this project. StormBrixx is a smart designed surface water retention, detention & infiltration system. The large concrete slab made it necessary to collect and store the runoff water before it can be released to the public pipe systems to prevent flooding. Installed in the basement, the system also needs to be able to endure traffic above the installation, which made StormBrixx the perfect choice.

Benefits

- Brick and cross bonding stacking for optimal stability.
- Low flow, drain down and silt management features.
- High void ratio minimizes excavation volume.
- Man access and 3D inspection access to tank interior.
- Manufactured from recyclable polypropylene.
