

ACO Cablemate/Access

Rhinocast® Access Cover

PORTFOLIO

New World Ravenswood Canterbury Region

The newly built New World Ravenswood supermarket needed a discreet, yet well designed access solution for the underground electrical and communication system. T66 Polymer Concrete cable pits were used along with recessed Rhinocast covers, that can be filled with tiles matching the surrounding floor for minimal disruption. Whereas the cable pits inside the building have custom stainless decorative edges that blend in with the overall stainless design, the exterior cable pits are completed with hard wearing ductile iron edges for high durability.

Benefits

- The recessed **Rhinocast®** access cover offers the ability to fill the cover with tiles to match or complement the surrounding pavement, preserving the continuity of the floor surface.
- For an attractive finish a stainless steel decorative edge can be fixed.
- Certified to AS 3996 Class B loading.
