

## ACO ThresholdDrain

## Cantilever ThresholdDrain

### PORTFOLIO

#### Mount Central

Originally a variety store, the corner of two main streets in Mt Maunganui needed a makeover. A high-end multi-use development was planned, incorporating two buildings linked with a covered courtyard. To maximise flow from the covered courtyard to the cafes and restaurants, architects chose to include level thresholds in their design. An E2 compliant solution was required, as well as needing to cope with being in a sea spray zone. ACO therefore provided a stainless steel solution that is corrosion resistant.

#### Benefits

- ACO's Cantilever ThresholdDrain with Stainless Steel 5 Star **Heelsafe**® Anti-Slip grate, providing a pedestrian friendly surface water management and collects runoff from doors and windows during storms.
- It provides E2 compliant level threshold drainage and complies with AS 1428.2 (Clause 9c), ensuring safe passage of walking canes and wheelchairs.
- The grate is corrosion resistant and provides an attractive architectural finish.
